Healthcare Policy and Reform: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources 2018-08-03 Industry professionals, government officials, and the general public often agree that the modern healthcare system is in need of an overhaul. With many organizations concerned with the long-term care of patients, new strategies, practices, and organizational tools must be developed to optimize the current healthcare system. Healthcare Policy and Reform: Concepts, Methodologies, Tools, and Applications is a comprehensive source of academic material on the importance of policy and policy reform initiatives in modern healthcare systems. Highlighting a range of topics such as public health, effective care delivery, and health information systems, this multi-volume book is designed for medical practitioners, medical administrators, professionals, academicians, and researchers interested in all aspects of healthcare policy and reform.

A Road Map to the Development of European SME Networks Agostino Villa 2008-10-03 Recent European Commission studies recall the urgency of promoting new and more robust Small and Medium-sized Enterprises (SMEs), due to the rise of enormous global markets and the emergence of a new industrial system originating from the distinctly different business culture of the Far East. A "road map" for the survival of SMEs in Europe must be based on an accurate analysis of the most significant causes behind the weaknesses of SMEs. Several research projects conclude that SMEs must join together to create "networks". Yet the majority of the existing networks suffer from a lack of real coordination: it is clear that a method for analyzing the governance of the network and its collaboration efficiency is essential for assuring effective performance. "A Road Map to the Development of European SME Networks" addresses this task: describing the method of analysis, allowing comparisons to be made between SME networks in different European countries, and providing information on a supporting web site.

Web Services Anura Guruge 2004-04-08 This is a soup-to-nuts reference guide on all aspects of Web Services - where Web Services is a fast emerging set of Internet-specific middleware technology to further promote the growth of all aspects of e-business via standardization, collaboration and "franchising." This book is best characterized as an executive brief for IT and senior management rather than a nuts-and-bolts technical guide for portal implementers. Think of it as the "Cliffs Notes on Web Services." Given this audience, the book consistently focuses on business needs, value propositions, ROI, proven solutions and actual examples of current implementations. Each chapter also ends with a 10-item "Q&A" section that consolidates and summarizes the information discussed in the chapter. The book is illustrated with detailed technical diagrams, includes lots of arresting subtitles and contains many bullet lists and tables to facilitate (and encourage) productive skimming. Decision makers - the intended readership for this book - gain increasing comfort and confidence as they get into the book that they are getting to see all facets of the issues, on a consistent basis, and that they will not be blind-sided at meetings by people asking 'difficult' questions. At the end of each chapter, Guruge summarizes and reinforces key points, allowing the reader to skim through the topics for crucial information. The book also leverages living outside resources and ensures that the readership always has ready and consistent access to any and all terms, definitions and concepts they might not be familiar with. "Debate style" presentation, focusing repeatedly on pros-and-cons, e.g., .NET vs. Java, open vs. proprietary and buy vs. build Author's trademark detailed architectural and network diagrams of portal implementations Q&A section at end of each chapter

Business Information Eileen G. Abels 2008 "Business Information: Needs and Strategies provides a comprehensive understanding of business information. In addition to defining the topic, the book explores the underlying needs that drive one to seek business information, and the nature of detail required to resolve such issues. Important resources, channels and effective strategies used to secure and locate information are also highlighted." "A detailed point of reference, this book is an ideal support to business research for academics and professionals alike, whilst offering valuable and contemporary commentaries to students in this subject area. Faculty in library and information schools as well as business schools will find it a relevant and up-to-date textbook."--BOOK JACKET.

Handbook of Research on Developing Smart Cities Based on Digital Twins Del Giudice, Matteo 2021-01-15 The advent of connected, smart technologies for the built environment may promise a significant value that has to be reached to develop digital city models. At the international level, the role of digital twin is strictly related to massive amounts of data that need to be processed, which proposes several challenges in terms of digital technologies capability, computing, interoperability, simulation, calibration, and representation. In these terms, the development of 3D parametric models as digital twins to evaluate energy assessment of private and public buildings is considered one of the main challenges of the last years. The ability to gather, manage, and communicate contents related to energy saving in buildings for the development of smart cities

must be considered a specificity in the age of connection to increase citizen awareness of these fields. The Handbook of Research on Developing Smart Cities Based on Digital Twins contains in-depth research focused on the description of methods, processes, and tools that can be adopted to achieve smart city goals. The book presents a valid medium for disseminating innovative data management methods related to smart city topics. While highlighting topics such as data visualization, a web-based ICT platform, and data-sharing methods, this book is ideally intended for researchers in the building industry, energy, and computer science fields; public administrators; building managers; and energy professionals along with practitioners, stakeholders, researchers, academicians, and students interested in the implementation of smart technologies for the built environment.

The PR Campaigns Worktext Maria Elles Scott 2020-07-16 Why just read about creating a PR campaign when you can actually create a campaign yourself as you learn? By combining coverage of fundamental PR campaign concepts with the classic design of a workbook, *The PR Campaigns Worktext* by Maria Elles Scott walks students through building their own PR campaigns. Unlike other campaigns texts, this worktext presents concepts, applications, and examples in campaign building; Scott then asks students to complete worksheets with focused tasks so students have all the tools and direction to create and customize their specific campaign. This approach helps students think about their client's needs, and guides students through building the campaign part by part. In combining the readings with prompts to complete worksheets, this book will serve as a student's trusted resource as they take their first steps into the world of PR.

The Next Wave of Sociotechnical Design Leona Chandra Kruse 2021-07-27 This book constitutes the thoroughly refereed proceedings of the 16th International Conference on Design Science Research in Information Systems and Technology, DESRIST 2021, held in Kristiansand, Norway, in August 2021.\* The 24 revised full research papers, included in the volume together with 6 short contributions and 7 prototype papers, were carefully reviewed and selected from 78 submissions. They are organized in the following topical sections: impactful sociotechnical design; problem and contribution articulation; design knowledge for reuse; emerging methods and frameworks for DSR; DSR and governance; the new boundaries of DSR. \*Apart from the planned on-site event, the hybrid conference model was explored due to the Covid-19 pandemic.

Digital and Social Media Marketing Aleksej Heinze 2016-11-18 *Digital and Social Media Marketing: A Results-Driven Approach* is an exciting new industry-led, research-informed and results-driven guide to digital commerce. Its examples draw from SMEs and from Europe to offer a unique perspective for those learning about digital marketing and, having been developed in close collaboration with the Search Engine Marketing Trade Association (SEM-TA), it is a reliable source of prevailing industry standards for practitioners at the cutting edge of their trade. Unlike other digital marketing texts, this accessible textbook gives special consideration to the ethical challenges raised by an increasingly digital world. Equally unique is the book's Digital Business Maturity Model, which offers organisations a clear roadmap for understanding their relative levels of technology adoption. Embracing the true spirit of Digital and Social Media Marketing, the book will be the first of its kind in this field with digital learning materials, case studies and exercises available in a supporting Massive Open Online Course (MOOC). The MOOC will enhance learners' experience and create an interactive international learning community. This book will provide a hands on, accessible and user friendly platform to turn skills and knowledge into strategic advantage. Ideal for postgraduate learners, instructors interested in providing a unique and up-to-date learning experience and for SMEs and practitioners aiming to be at the cutting edge of Digital and Social Media Marketing.

Managing the Web of Things Michael Sheng 2017-02-10 *Managing the Web of Things: Linking the Real World to the Web* presents a consolidated and holistic coverage of engineering, management, and analytics of the Internet of Things. The web has gone through many transformations, from traditional linking and sharing of computers and documents (i.e., Web of Data), to the current connection of people (i.e., Web of People), and to the emerging connection of billions of physical objects (i.e., Web of Things). With increasing numbers of electronic devices and systems providing different services to people, Web of Things applications present numerous challenges to research institutions, companies, governments, international organizations, and others. This book compiles the newest developments and advances in the area of the Web of Things, ranging from modeling, searching, and data analytics, to software building, applications, and social impact. Its coverage will enable effective exploration, understanding, assessment, comparison, and the selection of WoT models, languages, techniques, platforms, and tools. Readers will gain an up-to-date understanding of the Web of Things systems that accelerates their research. Offers a comprehensive and systematic presentation of the methodologies, technologies, and applications that enable efficient and effective management of the Internet of Things Provides an in-depth analysis on the state-of-the-art Web of Things modeling and searching technologies, including how to collect, clean, and analyze data generated by the Web of Things Covers system design and software building principles, with discussions and explorations of social impact for the Web of Things through real-world applications Acts as an ideal reference or recommended text for graduate courses in cloud computing, service computing, and more

New Methods of Market Research and Analysis G. Scott Erickson 2017-10-27 *New Methods of Market Research and Analysis* prepares readers for the new reality posed by big data and marketing analytics. While connecting to traditional research approaches such as surveys and focus groups, this book shows how new technologies and new analytical capabilities are rapidly changing the way marketers obtain and process their information. In particular, the prevalence of big data systems always monitoring key performance indicators, trends toward more research using observation or observation and communication together, new technologies such as mobile, apps, geo-locators, and others, as well as the deep analytics allowed by cheap data processing and storage are all covered and placed in context. This book can be used as a supplement to a traditional marketing research text or on its own.

Wiley Pathways E-Business Greg Holden 2008-03-28 For anyone thinking about starting an online business, this resource

provides all the steps needed to take an idea and turn it into reality. Assessment of the Commercial Applicability of Artificial Intelligence in Electronic Businesses Thomas Kramer 2002-04-18  
Abstract: Artificial intelligence has already been applied to many areas since its official birth in 1956, but most of the applications ended up in great disappointments as the benefits they reaped were very low. Due to this reason the vast interest in applying this relatively young technology to business calmed down in the late seventies when scientists recognized that the current intelligent systems were not yet plug-and-play solutions, hence mature enough to fully meet the business needs and requirements at that time. However, the limited commercial applicability of artificial intelligence in the past has to be rethought today as with the significant progress in artificial intelligence research and the growth of electronic commerce conducted over the World Wide Web new opportunities for business applications of artificial intelligence have emerged consequently. Nowadays horizontal and vertical electronic commerce is significantly driven by intelligent applications. Their employment in electronic businesses may well generate huge returns on investments, providing a technology-based response to increasing competition, the volatility of business models, and the pace of technology change. Despite the wide assumption that artificial intelligence will have a major impact on Internet-related businesses today and especially in the next years to come, it is uncertain to what extent it performs and will perform that way. The purpose of this thesis is to analyse, assess and evaluate the potential of commercial applications of artificial intelligence in electronic businesses. Therefore the main research question of this paper is whether artificial intelligence is reasonably applicable in Internet-related businesses, first in terms of effectiveness and second in terms of efficiency. In the assessment the application of artificial intelligence in electronic businesses is represented by the employment of intelligent agents. In harmony with the major research question emphasized above, the paper provides a thorough discussion about the economic impact of the most common and relevant application types of intelligent agents on electronic commerce environments. In addition the driving underlying technologies of intelligent agents are analysed with respect to artificial intelligence techniques and methods, and current standardisation efforts. [...]

The Web at Graduation and Beyond Gottfried Vossen 2017-08-17 This book provides a comprehensive treatment of the rapidly changing world of Web-based business technologies and their often-disruptive innovations. The history of the Web is a short one. Indeed many college graduates today were not even born when the Web first emerged. It is therefore an opportune time to view the Web as having reached the point of graduation. The Web has led to new ways in which businesses connect and operate, and how individuals communicate and socialize; related technologies include cloud computing, social commerce, crowd sourcing, and the Internet of Things, to name but a few. These developments, including their technological foundations and business impacts, are at the heart of the book. It contextualizes these topics by providing a brief history of the World Wide Web, both in terms of the technological evolution and its resultant business impacts. The book was written for a broad audience, including technology managers and students in higher education. It is also intended as a guide for people who grew up with a background in business administration or engineering or a related area but who, in the course of their career paths, have reached a point where IT-related decisions have become their daily business, e.g., in digital transformation. The book describes the most important Web technologies and related business applications, and especially focuses on the business implications of these technologies. As such, it offers a solid technology- and business-focused view on the impact of the Web, and balances rules and approaches for strategy development and decision making with a certain technical understanding of what goes on "behind the scenes."

Creative Thinking Enhancement Skills Using Mind Mapping Techniques Dwayne Anderson 2020-12-15 Creative Thinking Enhancement Skills Using Mind Mapping Techniques Having a busy life doesn't mean that you just let things happen. Planning your life and make alterations to different areas can fill your life with joy and passion. When we talk about mind maps,

there are issues you can mind map that may not have occurred to you. We will go over some areas of your life that may need improvement and how you can set up a mind map to see success. Mind maps are underused at this point in time, considering that you are able to create and view them on multiple devices. Any business that wants to succeed in these trying times should immediately get on board with using mind maps. While we covered several fantastic ways to improve your business with mind maps, we certainly encourage you to incorporate them into your personal life as well. The more happy and successful you are in your personal life, it will transfer into extraordinary dividends in your world. Successful entrepreneurs may also be thought of as "idea machines." Going back in history, we would consider Leonardo da Vinci, Thomas Edison, and Nikola Tesla as not only inventors but entrepreneurs. We know that Leonardo used his own form of mind mapping to make notes about his creations, long before Tony Buzan brought about the modern mind mapping system. The entrepreneur of today has many hats to wear to run a successful business. Productivity comes to mind as an entrepreneur needs to look at ideas and bring the gold to the top while getting rid of the debris. Mind mapping helps with the elimination process connected to productivity. Tasks for entrepreneurs are often extremely complex, and a regular "to-do" list does not fit into their daily routines. Mind maps allow the entrepreneur to flesh out tasks, adding in pertinent data such as timelines and responsibilities.

**Information and Communication Technology for Competitive Intelligence** Dirk Jaap Vriens 2004-01-01 In today's complex and dynamic world the need to be informed about what is going on in the environment of the organization is increasing rapidly. To this end, organizations implement a process called competitive intelligence. Competitive intelligence (CI) is about gathering and analyzing environmental information for strategic purposes. However, the noncritical implementation of these tools may lead to an information overload or to environmental myopia. To select the right ICT tools for CI, an organization needs to understand the role of ICT in the CI-process. Information and Communication Technology for Competitive Intelligence addresses this need. It assesses the role and possibilities of ICT in the intelligence activities from different perspectives.

How important is Web 2.0 for the tourism sector and how can the industry apply to this trend? Tim Lellinger 2010-11-19  
Inhaltsangabe: Introduction: 1.1 The Topic: Aims and Objectives: In the 1990's a revolutionary technological invention, the Internet, paved the way to a much easier and endless expandable way of communication all over the world. But although it was initially seen as a way of private communication, companies realised the potential of the invention and started to use the Internet for matters like distribution, communication, logistics and more. As internationality was one of the biggest advantages of the Internet, especially the tourism sector tried to use the Web for commercial purposes. Starting with Computer Reservation Systems (CRS) and own Websites, the usage transformed to complete e-commerce concepts, offering online-shopping and electronic ticketing. Today, one of the most attractive aspects of the Internet for the tourism branch is the possibility to reach a maximum of potential clients. From 1997 till 2006 the percentage of Internet users increased from 6,5% to 59,5%. By December 2008, over 43 million people in the United Kingdom were using the internet and most of them already used the Web for informing themselves about commercial products. But the study Internet Facts 2006 even shows more potential. Considering the trend, 59,7% of the users plan to book their complete vacation through the Internet, 56,4% plan to use the network for buying airline and train tickets and 52,2% want to book their hotel rooms via Web. Since the creation of the Internet, the commercial situation for suppliers changed more and more from a seller's to a buyer's market. With the help of new technologies and the improved accessibility through easy understandable software, consumers experienced a huge empowerment in the internet. Especially in the tourism sector, this consumer empowerment changed the market completely through more transparency and communication amongst the customers. As, in the near future, the strength of the buyers market will grow even more, suppliers now have to adapt to the new trend to stay competitive and to satisfy the customers. The personal reasons for selecting this topic can be concluded in 3 different facts. Firstly, my last studies in tourism introduced me to the market and the recent developments and therefore showed me the importance of differentiation and of using modern distribution channels. Secondly, my first studies were focused on information technologies and thus showed me current possibilities within Web 2.0 [...]

Guidelines on irrigation investment projects Food and Agriculture Organization of the United Nations 2019-04-15 Irrigation has been and will continue to be an agricultural and rural investment priority. Development of the irrigation sector faces multiple challenges, including water scarcity and degradation, competition over shared resources, and the impact of climate change. Innovations are needed to address these challenges, as well as emerging needs, and to promote productive, equitable and sustainable water management. These guidelines, produced by an inter-agency team, highlight experiences and lessons learned from global irrigation investment operations. They introduce innovative approaches, tools and references, and provide practical guidance on how to incorporate or apply them at each stage of the investment project cycle. The guidelines will be a useful resource for national and international professionals involved in irrigation investment operations.

Wedding Planning Company Tim Roncevich 2009-01-03 Upstart Business Consulting Group ("UBCG") creates comprehensive business plan kits for a variety of businesses and industries. This particular kit focuses on starting a wedding planning company. When you purchase one of our business plan kits, you will have access to the tools that will allow you to be an entrepreneur. We only create business plan kits for businesses that can capitalize on current trends and consumer demand. All businesses we cover require an initial start-up capital investment of \$1,000 to \$10,000. Although the required start-up capital is relatively small, you will have the potential for substantial cash flow and a high return on investment. The format of the business plan kits are modeled after business plans that have been used in successful start-up companies. These business plan kits are for those individuals who want a better work/life balance, want the flexibility, pride, and fulfillment that comes with being an entrepreneur, and want to earn extra income.

Providing access to the digital media and learning tools (even to the extent of mobile apps) to the students would allow them to keep pace with innovations in learning technologies, learn according to their own pace and improve their understanding level and have instantaneous feedback and evaluation. The book explores these new challenges and scope of using computational intelligence in educational technology. The book also addresses how based on the data collected from the outcome of conventional educational system, intelligent diagnostic and feedback system is developed which will change the teaching strategies and corresponding teaching-learning process. The book covers a wider framework of digital pedagogy and its intelligent applications on various sectors of education system.
